PROFILE

Full-Stack Engineer focused on building and stabilizing React/TypeScript product interfaces, frontend architecture, and backend-connected workflows.

Works across frontend quality, API behavior, authentication, payments, and user-facing reliability in fintech, travel intelligence, operational tooling, and SaaS-style products.

Strong in turning unclear requirements into shipped features, debugging active issues, communicating tradeoffs clearly, and delivering production-ready web applications for remote teams.

EXPERIENCE

TokenFlow

February 2025 - Present

Full-Stack Engineer

- Built and maintained client-facing React/TypeScript applications across multiple concurrent product streams, owning work from handoff to deployment.
- Owned frontend-heavy delivery including dashboards, forms, API-driven views, route handling, and loading/error/empty states across active products.
- Worked through active tickets and client feedback by isolating frontend/API issues, communicating tradeoffs, and shipping scoped fixes without blocking delivery.
- Implemented Jest test coverage for critical authentication and payment flows, catching regressions before they reached production.
- Standardized local and staging environments with Docker, reducing environment-specific bugs across active product streams.

ScaleRoad LLC

December 2023 - February 2025

Full-Stack Software Engineer

- Improved product UX and platform reliability through tailored frontend components, authenticated workflows, and API-connected product views.
- Built operational dashboards for records, payments, subscriptions, and status tracking using React, TypeScript, Node.js, and PostgreSQL.
- Reduced manual workflow friction by turning business processes into structured interfaces that were easier to track, review, and manage daily.
- Owned full delivery lifecycle - scoping, UI build, backend integration, QA, bug fixes, and launch - across assigned features under shifting requirements.

Private Clients

June 2023 - December 2023

Freelance Full-Stack Engineer

- Delivered 15+ custom web applications for fintech and digital asset clients, turning operational needs into authenticated dashboards, CRUD data views, and payment flows.
- Managed end-to-end delivery independently: scope, planning, implementation, testing, deployment, and client handoff.

SELECTED WORK

Professional Personal Website

Portfolio platform with visual resume, responsive project presentation, live project links, contact flow, and resume integration.

AtlasBrief

Flagship destination intelligence platform with React, TypeScript, Supabase, Stripe, auth, saved briefs, watchlists, stay planner, billing, alerts, reports, and production QA.

GeoRisk

Geopolitical risk intelligence dashboard for conflict monitoring, market impact, historical context, and simulated humanitarian relief tracking.

DevPath Hub

Developer growth platform for structured portfolio and career workflows, project planning, and resource-driven UX.

EchoRoom

Social/developer conversation platform with feed interactions, messaging, discovery flows, and live activity-oriented interface design.

TECHNICAL SKILLS

Frontend

React, Next.js, TypeScript, JavaScript, Tailwind CSS, Zustand, TanStack Query

Backend & Data

Node.js, Express, REST APIs, PostgreSQL, Prisma, Supabase, Docker

Payments & Auth

Stripe API, OAuth 2.0, Auth0, Secure Checkout & Subscription Flows

Workflow & QA

Git, GitHub Actions, Vercel, Jest, CI/CD, Responsive UI, Loading/Error/Empty States
