

LAZAR BUKEJLOVIC

FULL-STACK ENGINEER

lazarbukejlovic@icloud.com | <https://personal-website-tau-sandy.vercel.app/>
<https://www.linkedin.com/in/lazarbukejlovic> | <https://github.com/lazarbukejlovic>

PROFILE

Full-Stack Engineer with 3+ years of experience delivering production-ready React/TypeScript systems for fintech, SaaS, and digital asset clients. Track record of owning features end-to-end - from requirements and UI through backend logic, auth, Stripe billing, deployment, and QA. Strong in fast remote delivery, clean API contracts, and AI-assisted workflows without sacrificing engineering quality.

EXPERIENCE

TokenFlow

January 2025 - Present

Full-Stack Engineer

- Designed and maintained client-facing React/TypeScript product surfaces across 3+ concurrent streams, owning features from requirements through production deployment.
- Engineered backend-connected workflows with Node.js/Express, Supabase/PostgreSQL, auth/session logic, and Stripe billing flows, reducing integration bugs by 35%.
- Implemented Jest coverage for critical auth, payment, and saved-data flows, achieving 85%+ test coverage and cutting production regressions by 40%.
- Standardized Docker environments across local and staging, eliminating 90% of environment-specific bugs across active product streams.
- Used AI-assisted refactoring and debugging (Claude, Copilot) to accelerate delivery speed by approximately 30% while maintaining clean, reviewable code.

ScaleRoad LLC

December 2023 - January 2025

Full-Stack Software Engineer

- Built operational dashboards for records, payments, subscriptions, and status tracking using React, TypeScript, Node.js, and PostgreSQL, serving 10K+ monthly active users.
- Implemented strict API contracts and aggressive data-caching strategies, reducing API latency by 30% on latency-sensitive product surfaces.
- Optimized state-management patterns and lazy-loading across dashboard views, improving page load speed by 40%.
- Turned undefined product ideas into complete full-stack workflows - shaping requirements, designing UI flows, connecting backend logic, testing edge cases, and shipping production-ready features within tight deadlines.

Vertex Digital Studio

January 2023 - December 2023

Full-Stack Engineer (Contract / Remote)

- Delivered 15+ custom web applications for fintech, digital asset, and e-commerce clients, converting business workflows into authenticated dashboards, CRUD views, and payment flows.
- Architected secure auth flows, relational data models, and 20+ REST API endpoints across client projects, handling 500K+ daily data rows with 100% data integrity.
- Built a library of 30+ reusable React/TypeScript components, reducing repeated setup work by 50% and cutting deployment failures by 25% through automated testing.
- Managed full end-to-end delivery independently: scope, planning, implementation, testing, deployment, documentation, and client handoff.

SELECTED WORK

AtlasBrief | 2024 | React, TypeScript, Supabase, Stripe, Vercel

- Built a production-ready travel intelligence SaaS with Supabase Auth, RLS-backed data persistence, Stripe billing, and plan-based access limits.
- Implemented watchlists, stay planner, alerts, comparison tools, and decision-focused reporting flows across authenticated user sessions.
- Deployed on Vercel with refresh-safe routing, protected dashboard surfaces, and zero data leakage across subscription tiers.

GeoRisk | 2024 | React, TypeScript, PostgreSQL

- Engineered a decision-focused geopolitical risk intelligence dashboard with conflict monitoring, market-impact sections, and historical context views.
- Designed data-heavy responsive layouts keeping complex geopolitical signals readable across desktop and mobile environments.
- Structured modular risk content sections to reduce cognitive load while preserving fast access to key operational signals.

DevPath Hub | 2023 | React, TypeScript, Node.js

- Developed a structured developer growth platform for portfolio workflows, project planning, resource-driven UX, and career preparation.
- Implemented reusable UI patterns, guided onboarding paths, and maintainable state boundaries to support clean product journeys.

EchoRoom | 2023 | React, TypeScript, WebSockets, Supabase

- Built a real-time social/developer conversation platform with feed interactions, messaging, discovery flows, and live activity panels.
- Shaped interaction-heavy components, defensive empty states, and clean navigation patterns for consistent cross-device behavior.

TECHNICAL SKILLS

Frontend	React, Next.js, TypeScript, JavaScript, Tailwind CSS, Zustand, TanStack Query, Component-Driven Architecture
Backend & Data	Node.js, Express, REST APIs, GraphQL, PostgreSQL, Prisma, Supabase, RLS, Redis, Docker, Database Schema Design
Payments & Auth	Stripe API, OAuth 2.0, Auth0, JWT, Session Flows, Secure Checkout, Subscription Flows, Protected Routes, RBAC
Cloud & DevOps	AWS, Vercel, GitHub Actions, CI/CD, Docker Compose, Edge Runtime, Serverless Functions, Monorepos
Testing & QA	Jest, Cypress, Vitest, TDD, Loading/Error/Empty States, Production QA
AI Dev Tools	Claude Code, GitHub Copilot, ChatGPT, AI-assisted refactoring, debugging, documentation, product iteration
