## PROFILE

AI/LLM-focused Full-Stack Software Engineer with 4+ years shipping production React, TypeScript, and Next.js applications end-to-end. Built AI-powered SaaS products with real Anthropic and OpenAI integration — RAG, cited evidence, confidence scoring, and human-in-the-loop review — alongside operational dashboards used by roughly 10,000 monthly users. Strongest where frontend quality, backend architecture, AI product design, and production reliability meet, from Stripe billing and Supabase/Postgres to multi-tenant RLS.

## EXPERIENCE

### Senior Full-Stack Engineer — TokenFlow

Jan 2025 – Present · Remote

- Lead React/TypeScript product surfaces across 3+ concurrent client streams, from requirements through production deploy and post-launch QA.
- Engineered Stripe billing and Supabase/Postgres auth and session flows; introduced typed API contracts and webhook idempotency, eliminating duplicate-charge and subscription-sync bugs at the source.
- Wrote Jest suites around the auth, payment, and saved-data paths most prone to silent regressions, reaching ~85% coverage on those critical paths so releases ship without repeated manual re-checking.
- Standardized Docker-based local and staging environments so “works on my machine” stopped being a recurring failure mode across the team.

### Full-Stack Software Engineer — ScaleRoad LLC

Dec 2023 – Jan 2025 · Remote

- Shipped operational dashboards for records, payments, subscriptions, and status tracking in React/TypeScript/Node/Postgres, used by roughly 10,000 monthly active users.
- Defined strict API contracts and cached heavy dashboard queries to keep latency-sensitive views responsive under real load.
- Reduced perceived load time on those same ~10,000-user dashboards through state-management cleanup and route-level lazy-loading.
- Turned loosely-defined product ideas into shipped full-stack features — scoping, flow design, backend wiring, edge-case handling, and deployment under tight deadlines.

### Full-Stack Engineer (Contract) — Vertex Digital Studio

Jun 2022 – Dec 2023 · Remote

- Delivered 15+ web applications across SaaS, fintech, and data-heavy use cases, owning projects independently from initial scope through production handoff.
- Architected secure auth flows, relational data models, and REST APIs for each client engagement.
- Trimmed new-project setup time ~50% by building a 30+ component reusable React/TypeScript library used across client work.

## PROJECTS

### Sightline 2026

Live

Next.js · TypeScript · Supabase · Stripe · Anthropic · OpenAI · Vercel

- Built an AI-powered competitor-intelligence SaaS tracking 4 source types — pricing pages, changelogs, news, and hiring pages — end-to-end.
- Orchestrated Anthropic/OpenAI workflows that turn raw diffs into cited summaries, confidence scores, and a human review queue.
- Implemented multi-tenant RLS, Ask/RAG, Stripe billing, usage analytics, audit logs, and collaborative battlecards.

### MindPad AI 2026

Live

Next.js · TypeScript · Node.js · MongoDB · Stripe · Google OAuth · Vercel

- Built an AI-driven productivity SaaS spanning tasks, focus sessions, execution plans, analytics, and team collaboration.
- Connected Google OAuth, MongoDB persistence, Stripe plan gates, and a split Vercel frontend/API deployment.
- Diagnosed and resolved 4 production failure modes around OAuth redirects, serverless callback state, MongoDB ObjectId identity, and auth persistence across serverless invocations.

### AtlasBrief 2024

Live

React · TypeScript · Supabase · Stripe · Vercel

- Hardened a production SaaS across 4 access-critical layers — Supabase Auth, RLS-backed data isolation, Stripe billing, and plan-based access limits.
- Delivered watchlists, a stay planner, alerts, and reporting — with zero data leakage across subscription tiers enforced in Postgres via RLS.

## TECHNICAL SKILLS

**Frontend & UI** React · Next.js · TypeScript · JavaScript · Tailwind CSS · Zustand · TanStack Query · Framer Motion

**Backend & Data** Node.js · Express · PostgreSQL · Prisma · Supabase · MongoDB · REST APIs · Redis

**AI & LLM** Anthropic API · OpenAI API · RAG · LLM Integration · AI-Assisted Development

**Payments & Auth** Stripe · OAuth 2.0 · Auth0 · JWT & Session Flows · Protected Routes / RBAC

**Infra & QA** Docker · Vercel · GitHub Actions (CI/CD) · Jest · Vitest · Cypress
