ABOUT

Full-Stack Engineer focused on architecting and delivering modern product applications with strong frontend execution and strong backend architecture. Experience spans ownership-driven delivery across client products, structured systems thinking, and reliable execution in finance-oriented and digital asset-related environments.

EXPERIENCE

TokenFlow

February 2025 - Present

Full-Stack Engineer

- Built and improved client-facing web applications using React, TypeScript, Node.js, REST APIs, and backend-connected product flows across multiple active project streams.
- Developed dashboard interfaces, authenticated user flows, form-heavy product screens, responsive layouts, and API-driven data views with a focus on usability and maintainable component structure.
- Implemented frontend-to-backend workflows including data fetching, validation states, loading/error/empty states, route handling, and production-focused UI behavior across desktop and mobile.
- Translated product requirements and client feedback into clear technical tasks, shipped features, debugging support, refactoring, Git/GitHub workflows, and deployment-ready product polish.

Private Clients

December 2023 - February 2025

Freelance Full-Stack Engineer

- Delivered custom full-stack web applications for private clients in finance-oriented and digital asset-related environments, turning operational requirements into usable internal software tools.
- Built dashboard-driven products for tracking records, client activity, payments, subscriptions, project status, and operational workflows using React, TypeScript, Node.js, APIs, and structured data models.
- Replaced manual spreadsheet-based processes with structured web applications, improving visibility, consistency, and day-to-day usability for client teams.
- Implemented authentication flows, protected pages, CRUD-style data management, responsive UI, payment-related flows, and deployment-ready frontend architecture.
- Led hands-on delivery from requirements to launch: clarifying scope, planning features, building interfaces, connecting backend logic, testing flows, fixing bugs, and preparing projects for real use.

SELECTED WORK

DevPath Hub - Led collaborative product build for developer growth workflows.

GeoRisk - Built geopolitical risk platform for conflict monitoring, market impact, history, and simulated relief tracking.

ForgeDesk - Delivered premium full-stack ecommerce product with Stripe checkout and protected admin workflows.

EchoRoom - Designed social communication application with feed interaction, messaging, discovery, and live discussion rooms.

Foundry Studios - Implemented booking and payments product centered on service flows and scheduling logic.

Professional Personal Website - Structured premium engineering profile site with contact and scheduling flow.

ClientFlow - Built business operations platform for client management, invoicing, and dashboard visibility.

TECHNICAL SKILLS

Frontend: React, Next.js, TypeScript, Tailwind CSS

Data/Payments: PostgreSQL, Prisma, Supabase, Stripe API

Backend: Node.js, Express, REST APIs, Authentication & Authorization

Workflow: Git, GitHub, Debugging, Error/Loading/Empty State Design
