PROFILE

Full-Stack Software Engineer with 4 years shipping production React/TypeScript and Next.js applications end-to-end, including AI-powered SaaS products, operational dashboards used by ~10,000 monthly users, Stripe billing, OAuth, Supabase/Postgres, and multi-tenant RLS. Strongest in product-facing engineering where frontend quality, backend workflows, LLM integration, AI-driven UX, and production deployment meet.

EXPERIENCE

- TokenFlow

Full-Stack Engineer

- Own React/TypeScript product surfaces across 3+ concurrent client streams, including dashboards, AI-assisted workflows, auth, billing, and production QA.
 - Built Stripe billing and Supabase/Postgres auth + session flows; introduced typed API contracts and webhook idempotency to kill duplicate-charge and subscription-sync bugs at the source.
 - Wrote Jest suites around the auth, payment, and saved-data paths most prone to silent regressions, so releases ship without repeated manual re-checking; reached ~85% coverage on those critical paths.
 - Standardized Docker-based local and staging environments so "works on my machine" stopped being a recurring failure mode across the team.

January 2025 - Present
- ScaleRoad LLC

Full-Stack Software Engineer

- Built operational dashboards for records, payments, subscriptions, and status tracking in React/TypeScript/Node/Postgres, used by roughly 10,000 monthly active users.
 - Defined strict API contracts and cached heavy dashboard queries to keep latency-sensitive views responsive under real load.
 - Cut perceived load time on data-heavy views through state-management cleanup and route-level lazy-loading.
 - Turned undefined product ideas into shipped full-stack features - scoping, flow design, backend wiring, edge-case handling, and deployment under tight deadlines.

December 2023 - January 2025
- Vertex Digital Studio

Full-Stack Engineer (Contract / Remote)

- Delivered 15+ custom web applications for fintech, SaaS, and data-heavy clients, turning business workflows into authenticated dashboards, CRUD tools, and payment flows.
 - Designed secure auth flows, relational data models, and REST APIs, owning each project independently from scope to client handoff.
 - Cut new-project setup time ~50% by building a 30+ component reusable React/TypeScript library used across client work.

June 2022 - December 2023

PROJECTS

- Sightline

2026

Next.js, TypeScript, Supabase, Stripe, Anthropic, OpenAI, Vercel

- Built an AI-powered competitor-intelligence SaaS for tracking pricing pages, changelogs, news, and hiring pages.
 - Integrated LLM workflows with Anthropic/OpenAI to turn raw diffs into summaries, cited evidence, confidence scores, and review queues.
 - Solved multi-tenant RLS, Ask/RAG, Stripe billing, usage analytics, audit logs, and collaborative battlecards.

Live
- MindPad AI

2026

Next.js, TypeScript, Node.js, MongoDB, Stripe, Google OAuth, Vercel

- Built an AI-driven productivity SaaS that converts brain dumps into tasks, focus sessions, execution plans, analytics, and team workflows.
 - Designed product-facing AI workflows with Google OAuth, MongoDB persistence, Stripe subscriptions with plan gates, and split Vercel frontend/API deployment.
 - Debugged production issues around OAuth redirects, serverless callback state, MongoDB ObjectId identity, and auth persistence across serverless invocations.

Live
- Flowstate

2026

Next.js, TypeScript, Clerk, Anthropic API, Prisma, Tailwind

- Built an AI meeting-to-delivery workspace that turns raw meeting transcripts into source-linked tasks, owners, deadlines, and delivery workflows.
 - Designed human-in-the-loop AI review flows with transcript evidence, confidence scores, and low-confidence flags instead of hiding uncertainty.
 - Cinematic dark product system with an interactive AI assistant onboarding the user into an auth-backed flow.

Live
- AtlasBrief

2024

React, TypeScript, Supabase, Stripe, Vercel

- Built production SaaS with Supabase Auth, RLS-backed data isolation, Stripe billing, and plan-based access limits.
 - Built watchlists, a stay planner, alerts, and decision-focused reporting across authenticated sessions - with zero data leakage across subscription tiers enforced at the database with RLS.

Live

TECHNICAL SKILLS

Languages	TypeScript · JavaScript · SQL
Frontend	React · Next.js · Tailwind CSS · Zustand · TanStack Query · modular components
Backend & Data	Node.js · Express · PostgreSQL · Prisma · Supabase · REST APIs · Redis
AI & Product	LLM integration · Anthropic · OpenAI · AI workflows · RAG · AI-powered dashboards · human-in-the-loop review
Payments & Auth	Stripe · OAuth 2.0 · JWT & session flows · protected routes / RBAC
Infra & QA	Docker · Vercel · GitHub Actions (CI/CD) · Jest · Vitest · Cypress · production deployments
