PROFILE

Full-Stack Software Engineer with 4 years shipping production React/TypeScript and Next.js applications end-to-end — including AI-powered SaaS products with real LLM integration (Anthropic, OpenAI, RAG, human-in-the-loop review), operational dashboards used by ~10,000 monthly users, Stripe billing, OAuth, Supabase/Postgres, and multi-tenant RLS. Strongest where frontend quality, backend architecture, AI-driven product decisions, and production reliability meet.

EXPERIENCE

Full-Stack Engineer — TokenFlow

Jan 2025 – Present • Remote

- Lead React/TypeScript product surfaces across 3+ concurrent client streams, from requirements through production deploy and post-launch QA.
- Engineered Stripe billing and Supabase/Postgres auth + session flows; introduced typed API contracts and webhook idempotency, eliminating duplicate-charge and subscription-sync bugs at the source.
- Wrote Jest suites around the auth, payment, and saved-data paths most prone to silent regressions, reaching ~85% coverage on those critical paths so releases ship without repeated manual re-checking.
- Standardized Docker-based local and staging environments so “works on my machine” stopped being a recurring failure mode across the team.

Full-Stack Software Engineer — ScaleRoad LLC

Dec 2023 – Jan 2025 • Remote

- Shipped operational dashboards for records, payments, subscriptions, and status tracking in React/TypeScript/Node/Postgres, used by roughly 10,000 monthly active users.
- Defined strict API contracts and cached heavy dashboard queries to keep latency-sensitive views responsive under real load.
- Reduced perceived load time on those same ~10,000-user dashboards through state-management cleanup and route-level lazy-loading.
- Turned loosely-defined product ideas into shipped full-stack features — scoping, flow design, backend wiring, edge-case handling, and deployment under tight deadlines.

Full-Stack Engineer (Contract) — Vertex Digital Studio

Jun 2022 – Dec 2023 • Remote

- Delivered 15+ web applications across SaaS, fintech, and data-heavy use cases, owning projects independently from initial scope through production handoff.
- Architected secure auth flows, relational data models, and REST APIs for each client engagement.
- Trimmed new-project setup time ~50% by building a 30+ component reusable React/TypeScript library used across client work.

PROJECTS

Sightline 2026

Live

Next.js • TypeScript • Supabase • Stripe • Anthropic • OpenAI • Vercel

- Launched an AI-powered competitor-intelligence SaaS for tracking pricing pages, changelogs, news, and hiring pages.
- Integrated LLM workflows with Anthropic/OpenAI to turn raw diffs into summaries, cited evidence, confidence scores, and review queues.
- Implemented multi-tenant RLS, Ask/RAG, Stripe billing, usage analytics, audit logs, and collaborative battlecards.

MindPad AI 2026

Live

Next.js • TypeScript • Node.js • MongoDB • Stripe • Google OAuth • Vercel

- Developed an AI-driven productivity SaaS that converts brain dumps into tasks, focus sessions, execution plans, analytics, and team workflows.
- Structured product-facing AI workflows with Google OAuth, MongoDB persistence, Stripe subscriptions with plan gates, and split Vercel frontend/API deployment.
- Diagnosed and resolved production issues around OAuth redirects, serverless callback state, MongoDB ObjectId identity, and auth persistence across serverless invocations.

AtlasBrief 2024

Live

React • TypeScript • Supabase • Stripe • Vercel

- Hardened a production SaaS with Supabase Auth, RLS-backed data isolation, Stripe billing, and plan-based access limits.
- Assembled watchlists, a stay planner, alerts, and decision-focused reporting across authenticated sessions — with zero data leakage across subscription tiers enforced at the database with RLS.

TECHNICAL SKILLS

Frontend & UI

React • Next.js • TypeScript • JavaScript • Tailwind CSS • Zustand • TanStack Query • Framer Motion

Backend & Data

Node.js • Express • PostgreSQL • Prisma • Supabase • MongoDB • REST APIs • Redis

AI & LLM

Anthropic API • OpenAI API • RAG • LLM Integration • AI-Assisted Development

Payments & Auth

Stripe • OAuth 2.0 • Auth0 • JWT & Session Flows • Protected Routes / RBAC

Infra & QA

Docker • Vercel • GitHub Actions (CI/CD) • Jest • Vitest • Cypress
